Cendron A; Stacker S, Hughes RA, Achen MG,

WPI; 2001-442248/47.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

```
peptide loop fragment from an exposed loop of a growth factor protein and vortising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis. neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive trauma, substance-induced neovascularisation of the liver, excessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BRASIL; targeting peptide; bacterial infection;

The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Selective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing at target to a phage of display library in a first phase; exposing the first phase to a second phase; and separating the phase exposing the first phase to a second containing unbound phage in a single differential centification step. When compared to conventional cell phages to be separated to step. When compared to conventional cell panning methods, the BRASIL contification increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating disease states, such as:

CC diabetes inflammatory arthritis; atherosolerosis; cancer; autoimmune disease; bacterial infection; varial infection; carcer; autoimmune cdegenerative disease. The method comprises exposing a sample from an organ, tissue or cell type of interest, to a phage display library and recovering phage bound to the sample (the phage expresses targeting peptides). The peptides identified by the method of the invention may
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying targeting peptides useful for treating e.g. diabetes mellitus, inflammatory diseases, cancer, or autoimmune diseases, comprises exposing a sample to a phage display library and recovering phage bound to the sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Targeting peptide; cancer; Hodgkin's disease; cytostatic; immunosuppressive; anti-inflammatory; antiarthritic; antiviral; antiatherosclerotic; antidiabetic; antibacterial; diabetes mellitus;

                     antiatheroscierotic, antidiabetic, antibacterial and antiviral activities. The methods and composition are useful for identifying targeting peptides and one or more receptors for a targeting peptides. The targeting peptides are used for selective delivery of therapeutic agents, including gene therapy vectors and fusion proteins, to specific organs, tissues, or cell types in subject. The targeting peptide may also be used for treating diseases such as diabetes mellitus, inflammatory diseases, arthritis, atherosclerosis, cancer, autoimmune diseases, bacterial and viral infections and Hodgkin's disease. The present sequence represents a targeting peptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of one or more amino acids required for interaction with a ligand, to generate a model of the biological target, using the model to define a microenvironment in the biological target, using the model to define a microenvironment in the biological target capable of interacting with the microenvironment, and assembling the motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound libraries for screening natural ligands such as peptides and proteins or for producing chemical compounds based on drug motifs for screening. This sequence represents a peptide of a G-protein Coupled Receptor (GPCR), which relates to the novel compound library production method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Producing compound library, by generating biological target model using target sequence information, defining microenvironments interacting with ligand and motifs interacting with microenvironment, and assembling
cytostatic, immunosuppressive, anti-inflammatory, antiarthritic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Compound library; microenvironment; G-protein Coupled Receptor; GPCR.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for producing a compound library. The novel method involves reducing a biological target into a group of one or more amino acids required for interaction with a ligand, to generate a model of the biological target, using the model to define a microenvironment in the biological target capable of interacting with the ligand, defining motifs which interact with the microenvironment, and assembling the motifs to generate a compound library for synthesis. The novel method is useful to produce compound libraries for screening natural ligands such as peptides and proteins or for producing chemical compounds based on drug motifs for screening. This sequence represents a peptide of a G-protein Coupled Receptor (GPCR) including Endothelin BT-A receptor, which relates to the novel compound library production method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .,

The present invention describes a method for screening a ligand library (LL). The method comprises: (a) contacting the LL with an anti-target (AT) to allow the ligands to bind to the AT: (b) separating unbound ligands with a selected target (T) to allow binding of unbound ligands with a selected target (T) to allow binding of unbound ligands with a selected target (T) to allow binding of unbound ligands with a selected target (T) to allow binding of unbound ligands with a selected target (T) to compensate (C); (d) separating (C) from ligands which do not bind (T); and (C) controllypeptides or oligonucleotides. A ligand (I) identified by the nethod can be used in a cleaning therapeutic or personal care application. The method is preferably useful for identified by the method can be used in a cleaning, which involves contacting peptides (C) useful in cleaning compositions, which involves contacting peptides (I) interay with AT such as fabric, ceramic, glass, stainless steel or library with AT such as fabric, ceramic, glass, stainless steel or contacting unbound AT peptides; contacting unbound AT peptides; contacting method as exain, soil-based derived stain, and charted stain, soil-based derived stain, oil-based derived stain, and charted stain, soil-based derived stain, oil-based derived stain, oil-ba
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Screening ligand library comprises allowing binding of ligand with antitarget, contacting unbound ligands with selected target to form target-bound ligand complex and identifying target bound ligands on the complex.
                                                                                                                                                                                                                                                                                                                                 Human; tumour necrosis factor alpha; TNF-alpha; VEGF; detergent; stain; bacteriophage; phage library; vascular endothelial growth factor; collar soil; polyurethane; egg; tea; hair; skin; cleaning composition.
                                                                                                                                                                                                                                         Vascular endothelial growth factor binding peptide V-20 SEQ ID NO:98.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chen Y;

The invention relates to a novel isolated, synthetic or recombinant peptide or polypeptide which includes one or more endothelial cell peptide or polypeptide which includes one or more endothelial cell binding protein (BCBP) sequences. A peptide of the invention has anticumous, cytostatic, vasotropic, antipacitatic, dermatological, antidiabetic, antiarthritic, dermatological, antidiabetic, antiarthritic, vulnerary, antiulcer, ophthalmological, antidiatoterial, and gynaecological activity. The peptide cell so promoting, reducing the proliferation and/or migration of cendethelial cells, by treating the cells with an ECBP agonist, which is preferably the peptide, to promote proliferation and/or migration of the created cells with an ECBP antagonist, which is preferably the peptide of the invention. A peptide of the invention is also useful for manufacturing a medicament for promote or reduce anglogenesis at one or more sites in trated mammal. The medicament is useful for promoting or reducing cangiogenesis at one or more sites in anglogenesis. ECBP sequences are useful to alter the infectivity spectrum of invention particle. The present sequence represents an ECBP of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

High-A3-like molecules. A cytotoxic T cell (TLD) response against a particular antigen (Ag) is induced in a patient by contacting a CTL with an immunogenic peptide of 9-15 amino acids which binds to at least two High-A3-like molecules with dissociation constant less than 500 nM and induces a cytotoxic T cell response. The immunogenic peptide has a sequence of 9 amino acids, comprising a binding motif, with from the N-to C-termini: primary anchor sites (RRM) at positions 2 (selected from Ala, leu, Ile, Val, Met, Ser or Thy) and 9 (Arg or Lys) and at least one ceronary anchor sites (SAR), i.e. Tyr, Phe or Tro at positions 3, 6 or 7, and/or pro at position 8. The immunogenic peptides are used in peptide based vaccines and therapeutic compositions, for treating viral, based vaccines and therapeutic compositions, for treating viral, constaint or fungal diseases or cancer, e.g. prostatic cancer, hepatitis B or C, renal or cervical carcinoma, lymphoma, cytomegalovirus infection or condyloma acuminatum. They can also be used to elicit a CTL response the nation acuminatum of the cells to the patient, e.g. where

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the patient does not respond to peptide vaccines or other therapies. Selection of specific residues for PAR and SAR results in higher binding affinity and thus increased immunogenicity. (Updated on 27-AUG-2003 to

AAY45390 to AAY48214 represent specifically claimed immunogenic peptides
having a human major histocompatibility complex (MHC) Class I (also known
as human leukcovyte antigen (HLA) binding motif. The immunogenic peptides
can bind to a specific HLA allele (i.e. HLA-A subtypes HLA-A2.1, A1, A3.2
cor A24.1 or HLA-B or C) and induce a cytotoxic T cell response against
the antigen from which the peptide is derived. Cytotoxic T lymphocytes
(CTLS) which destroy antigen-bearing cells are normally induced by an
attigen in the form of a peptide fragment bound to a HLA molecule, rather
than the intact foreign antigen itself, and are particularly important in
cution in the form of a peptide fragment bound to a HLA molecule, rather
therefore useful therapeutically to treat or prevent viral infections and
cancers in mammals (especially humans) e.g. prostate cancer, hepatitis B
conditions. They are also useful diagnostically, and can be used to
induce a cytotoxic T cell response, by contacting a cytotoxic T cell with
the peptide e.g. to produce CTLs ex vivo for influsion back into a
cancers. The polynucleotides encoding the immunogenic peptides are also
the peptide e.g. to produce CTLs ex vivo for influsion back into a
cut useful therapeutically and for immunisation as above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                    Immunogenic peptide having a human leukocyte antigen binding motif #1302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New immunogenic peptides with HLA binding motif, useful in treatment and diagnosis of cancers and viral diseases.
                                                                                  Human leukocyte antigen; binding; immunogenic; glycoprotein; MHC; HLA; immune response; T cell activation; major histocompatibility complex; cytotoxic T lymphocyte; CTL; tumour rejection; viral infection; cancer; prostate cancer; hepatitis B; hepatitis C; AIDS; renal carcinoma; vaccine; immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a novel alpha-IIb beta-3 integrin (glycoprotein IIb/IIIa or CD41/CD61) activating peptide. This cyclic peptide comprises a consensus binding motif (val-pro-Trp) and was identified by focusing a phage library screening on integrin ligands which are not blocked by a GRGDS peptide. The VPW motif is present in the A3-domain of von Wilebrand factor (vWf), suggesting that vWf is an activator of the alpha-IIb beta-3 complex, enabling stable platelet-VWf interaction. The invention relates to the use of novel peptides (see ABPS4823-25) comprising the consensus binding motif as pharmaceuticals for the treatment of thrombotic diseases and bleeding disorders, including von Willebrand disease, and in artificial tissue transplants to aid in wound healing and tissue regeneration (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                            New alphallb beta3 integrin activating peptides useful for manufacturing a composition for treating or preventing thrombotic or bleeding disorders, e.g. von Willebrand disease, and in wound healing and tissue regeneration.

```
The invention relates to a novel purified and isolated polymucleotide (S1, (N1) of Parapoxvirus ovis (PPVO) comprising a nucleotide sequence (S1, not defined in the specification), or its complementary sequence, fragment or functional variant. A polymucleotide of the invention has virucide, anti-HIV, hepatotropic, anti-Arbritic, thyrominetic, untindiabetic, contropropersity, anti-Arbritic, thyrominetic, immunosuppressive, anti-Arbritic, thyrominetic, protozoacide, amoebicide, and anti-Arbritic, thyrominetic, protozoacide, amoebicide, and anti-Arbritic, thyrominetic, protozoacide, amoebicide, and anti-Arbritic, thyrominetic, compared and fragments of a provogenome and transportation of anti-Arbritic, thyrominetic, compared and fragments of a provogenome are useful for manufacturing polynucleotides, or recombinant virus scomprissing a Vaccinia virus genome and fragments of a prov genome are useful for manufacturing the papillomatosis, herpes virus infections, liver fibrosis, HIV infections or influences, wayoolsame, amoeba or plasmedia, confictions with mycobacteria, mycoplasma, amoeba or plasmedia), asthma or conditions related to healing of wounds), allergic disease, and/or autoimmune diseases (systemic lupus erythematosus, Sjogren's disease, and/or autoimmune diseases (systemic lupus erythematosus, Sjogren's disease, Hashimoto's thyroiditis, rheumtoid arthitis or diabetes mellitus). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New polynucleotide and recombinant proteins of Parapoxvirus ovis, useful for manufacturing a medicament for treating virus related disease, viral infections, non-viral infections, proliferative disease or inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence is used in the exemplification of the invention

The present sequence is that of a novel alpha-IIb beta-3 integrin (glycoprotein Ilb/IIIa or CD41/CD61) activating peptide. This cyclic peptide comprises a consensus binding motiff (Val-Pro-Trp) that was identified by focusing a phage library screening on integrin ligands, which are not blocked by a GRGDS peptide. The motif is present in the A3-domain of von Willebrand factor (VWf), suggesting that vWf is an activator of the alpha-IIb beta-3 complex, enabling stable platelet-VWf interaction. The invention relates to the use of novel peptides
                                                                                                                                                                                                                                                     New alphalib beta3 integrin activating peptides useful for manufacturing a composition for treating or preventing thrombotic or bleeding disorders, e.g. von Willebrand disease, and in wound healing and tissue regeneration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               comprising the consensus binding motif as pharmaceuticals for the treatment of thrombotic diseases and bleeding disorders, including von Willebrand disease, and in artificial tissue transplants to aid in wound healing and tissue regeneration (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      'note= "binding motif, region specifically described in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents the amino acid sequence of cyclic peptide inhibitor #33 of lymphocyte function associated antigen-1 and intracellular adhesion molecule (LRA-1/CRM-1) interaction. A composition comprising a cyclic peptide inhibitor of LRA-1/ICRM-1 interaction is useful for treating haematopoietic neoplastic disease, myocardial infarction, radiation injury, asthma, rheumatoid arthritis or lymphoma metastasis. The composition is also useful for inhibiting in a subject the interaction between LRA-1 expressed on a leukocyce and ICRM-1 expressed on another cell, preventing retinoic acid, syndrome in a subject receiving all-trans retinoic acid, inhibiting growth of leukaemia cells, inhibiting emigration of leukocyces from blood into tissue and screening a candidate compound for binding to ICRM-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                            Composition comprising a cyclic peptide inhibitor of lymphocyte function associated antigen-1 and intracellular adhesion molecule 1 interaction, for treating e.g. asthma and myocardial infarction.

The present sequence is that of a novel alpha-IIb beta-3 integrin (glycoprotein IIb/IIIa or CD41/CD61) activating peptide. This cyclic peptide comprises a consensus binding motif (Val-Pro-Trp) and was identified by focusing a phage library screening on integrin ligands which are not blocked by a GRGDS peptide. The VPW motif is present in the A3 domain of von Willebrand factor (VWF), suggesting that VWF is an activator of the alpha-IIb beta-3 complex, enabling stable platelet-VWF interaction. The invention relates to the use of novel peptides (see for the treatment of thrombotic diseases and bleeding disorders, including von Willebrand disease, and in artificial tissue transplants to aid in wound healing and tissue regeneration (all claimed)
                                                                                                 New alphallb beta3 integrin activating peptides useful for manufacturing a composition for treating or preventing thrombotic or bleeding disorders, e.g. von Willebrand disease, and in wound healing and tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               3. .5

(glycoprotein InD/III or CP4/CD61) activating peptide. This cyclic peptide comprises a consensus binding motif (val-Pro-Trp) that was identified by focusing a phage library screening on integrin ligands, which are not blocked by a GRGDS peptide. The motif is present in the Adomain of von Willebrand factor (vWf), suggesting that vWf is an activator of the alpha-IID beta-3 complex, enabling stable platelet-vWf interaction. The invention relates to the use of novel peptides comprising the consensus binding motif as pharmaceuticals for the Willebrand disease, and in artificial tissue transplants to aid in wound healing and tissue regeneration (all claimed)
                                                                                                                                                                New alphalib beta3 integrin activating peptides useful for manufacturing a composition for treating or preventing thrombotic or bleeding disorders, e.g. von Willebrand disease, and in wound healing and tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 98, Application US/09832723

Patent No. US20020098524A1

GENERAL INFORMATION:

APPLICANT: Batell, David A.

APPLICANT: Chen, Yiyou

APPLICANT: Murray, Christopher J.

APPLICANT: Tijelna, Pilar

ITILE OF INVENTION: METHODS FOR SELECTIVE TARGETING

FILE REFERENCE: GC617-2

CURRENT APPLICATION NUMBER: US/09/832,723

CURRENT FILING DATE: 2001-04-11

PRIOR PILING DATE: 2000-04-14

NUMBER OF SEQ ID NOS: 117

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 98

LENGTH: 9

Patent No. 663047
GENERAL INFORMATION
GENERAL INFORMATION:
TITLE OF INVENTION: Peptide Inhibitors of LFA-1/CAM-1 Interaction
FILE REFERENCE: SCI200/4-ICIP
CURRENT APPLICATION NUMBER: US/09/760,599
CURRENT FILING DATE: 2001-01-17
NUMBER OF SEQ ID NOS: 56
SEQ ID NO 34
LENGTH: 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0

RA SEGUIANCE, AND MASS SPECTROMETRY.

RA Tyler M.J., Wallace J.C.;

RT 'Intoria rubella'. The skin peptide profile as a probe for the study of evolutionary trends of amphibians.";

R. Mast. J. Chem. 49:955-963 (1996).

C. -- FUNCTION: May act as a neuromodulator or neurotransmitter.

C. -- SUBCELLULAR LOCATION: Secreted.

--- TISSUE SPECIFICITY: Expressed by the skin dorsal glands.

C. -- MASS SPECIFOMETRY: Mm.9565; METHOD=RAB.

KW Amphibian defense peptide; Amidation; Neuropeptide;

KW Pyrrolidone carboxylic acid.

PYRROLIDONE CARBOXYLIC ACID.

"Identification and immunocytochemical localization of proctolin in
Pericardial organs of the shore crab, Carcinus maenas.",
Peptides 7:67-72(1986).
--- FUNCTION: Stimulates cardiac output and hindgut motility,
modulates viscaral and skeletal muscle in many archropods.
--- TISSUE SPECIFICITY: Found in the lateral white neurons and in
PIR, A01644 HOROHA.
PIR: A60411.
Neuropeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         JUBILIE (1:321-331)1203).

PUNCTION: ACTIVATES THE EXPRESSION OF THE TRPBA GENES ENCODING THE TWO TRYPOPHAN SYNTHAGE SUBUNITS. IN THE ABSENCE OF THE INDUCER (INDOLEGLYCEROL PHOSPHATE), TRPI BINDS UPSTREAM OF THE TRPAB OPERON, OVERLAPPING ITS OWN PROMOTER REGION.

SIMILARITY: Contains 1 HTH lybr-type DNA-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pseudomonas putida.

Cendron A;

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabeta carbon separation distances on opposite antiparallel strands of a

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, conversion or lymphangiogenesis in a mammal with a condition contaction or lymphangiogenesis in a mammal with a condition contaction is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive correction. The peptides are also used to modulate vascular permeability in faction induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoned cavity, pleura, cor brain. The peptides are used to inage blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF corp and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Obtaining compound that homes to selected organ or tissue - by in vivo panning method, specifically to identify brain, kidney, angiogenic vasculature or tumour tissue homing peptide (s).

                                                                                                                                                                                                                    0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a mouse kidney homing peptide. This sequence was identified by using in vivo panning to screen a library of potential organ homing molecules. The present sequence can be used to direct a moiety to a kidney tissue, by linking the moiety to the present sequence. Examples of potential moieties are drugs, toxins or a detectable label
involves administering a phage display library to a subject, and identifying expressed peptides which home to the desired organ or tissue. S. .g. brain, kidney, angiogenic vascular tissue or tumour tissue. The isolated peptides (see AAWI341-52, AAWI1181-86) can be used to target e.g. drugs, toxins or labels to the selected organ/tissue (claimed) or to identify and/or isolate target molecules (claimed). The peptides can be directly identified in vivo, as compared to prior art in vitro screening methods, which require further examination to see if they maintain specificity in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kidney, homing peptide; organ targeting; tissue targeting; mouse; cyclic.

The invention relates to an enriched library fraction containing molecules that selectively home to a selected organ or tissue such as brain, kidney or tumour recovered by in vivo panning. The invention generally relates to the field of molecular medicine, drug delivery and to a method of invivo panning for identifying a molecule that homes to a specific organ. The molecules, e.g., peptides, peptidomimetics, proteins and fragments of proteins contained in an enriched library fraction may treat disease or in diagnostic methods. The present sequence is a peptide from bacteriophage targetted to kidney. (Updated on 11-SEP-2003 to
                                                                                                                                                                                                     Enriched library fraction; brain; kidney; tumour; panning; diagnostic; molecular medicine; drug delivery; peptidomimetic; pharmaceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Enriched library fraction comprising molecules recovered by in vivo panning that selectively home to a selected organ or tissue useful for treating disease or in diagnostic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                73.8%; Score 31; DB 4; Length 7; 57.1%; Pred. The present invention relates to a method of recovering molecules that home to a selected organ or tissue. The method comprises administering to the subject the library of diverse molecules, collecting a sample of the selected organ or tissue (e.g. brain or kidney), and recovering from the sample several molecules that home to the selected organ or tissue. The method is useful for identifying molecules, particularly useful for method is useful for a target molecule is useful for e.g. raising an appearance of molecule is useful for e.g. raising an entibod specific for a target molecule, targeting a desired moiety (e.g. drug, toxin or detectable label) to the selected organ. Specifically, the method is useful for identifying the presence of cancer in a subject by linking an appropriate moiety to a tummour homing molecule. The present specifically home to a selected organ and, therefore provides a method provides a direct means for identifying molecules that a method and advantage over previous methods, which require that a molecule identified using an in vitro screening method subsequently be avained to determine if it maintains its specificity in vivo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a composition comprising a bioactive agent chomogeneously dispersed in a targeted matrix (polymer and targeting chomogeneously dispersed in a targeted matrix for use as a delivery vehicle comprising a polymer associated with a targeting ligand, choice composition and treating cancer comprising administration of the composition. The method is useful for targeted delivery of a drug, cope composition. The method is useful for targeted delivery of a drug, capecially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides are disclosed including cathepsin-D Examples of targeting fibronectin- and vitronectin-binding integrins, peptides targeting the RGD (Arg-Gly-Asp)-motif in, e.g., antibodies, peptides targeting the analogenic endothelium of foolid tumours, tissue specific peptides (e.g. of lung, skin, panoreas, intestine, uterus, advenal gland and retina), and cationic cancer-targeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Targeted delivery system comprising a bioactive agent homogeneously dispersed in a targeted matrix is especially useful in cancer therapy.
   cathepsin-D substrate; peptides; neuroreceptor; adrenal receptor; fibronectin; vitronectin; integrin; RGD motif; angiogenic endothelium; tumour; cationic cancer-targeting peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             chimeric retrovirus envelope protein; ecotropic envelope protein; cytostatic; gene therapy; cancer.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human vegep (vascular endothellal growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betactor of the carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with a least one amino acid deleted prior cyclisation are used to interfere with angiogenesis, concattrised by angiogenesis, newscularisation or lymphangiogenesis; newscularisation or lymphangiogenesis in a mammal with a condition is diabetic retinopathy, psoriasis, arthropathy, confined monocyclic cerebrovascular accident, post-angioplasty restenosis, head, heat or cold craume substance induced newscularisation of the liver, excessive conformance induced newscularisation of the liver, excessive conformance induced newscularisation of the liver, excessive
                                                                                                                                                                                                                Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has or on lungs, peritoneal spring or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or D and extrait inflammation, especially rheumatoid arthritis, psoriasis and although and and inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                              Claim 49; Page 32; 102pp; English.

                                                                                                                                                                                                                                                                                                                  residues
                       The present invention describes a chimeric retrovirus envelope protein of (1) comprising an ecotropic envelope protein and a heterologous short peptide ligand inserted within the ecotropic envelope protein. Also described: (1) a nucleic acid molecule comprising a sequence encoding the recombinant chimeric envelope protein; (2) a vector comprising a nucleic acid sequence encoding the chimeric envelope protein; (3) a recombinant retroviral particle comprising a chimeric envelope protein; (3) a recombinant chimeric envelope protein; (3) a recombinant retroviral particle acid sequence encoding the chimeric envelope protein comprising a identifying a nucleic acid sequence encoding the chimeric envelope protein comprising a continuity and call ind (6) treating cancer. (1) has cytostatic acid sequence to a cell; and (6) treating cancer. (1) has cytostatic acitivity and can be used in gene therapy. The chimeric retrovirus envelope protein is contrained and infecting the cancer cell with a virus, e.g. cretrovirus comprising the chimeric envelope protein comprising a heterologous short peptide ligand and a therapeutically useful gene, e.g. encoding thymidine kinase. The present sequence represents a kidney cell contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                         New chimeric retrovirus envelope protein comprising an ecotropic envelope protein and a heterologous short peptide ligand inserted within the ecotropic envelope protein useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the treatment, prevention or ameliozation of a disease or disorder associated with: aberrant B lymphocyte stimulator (BLyS), BLyS receptor expression or activity; cells of hematopoietic origin; or proliferative disease; and reducing, inhibiting or stimulating immunoglobulin production, B cell proliferation and graft rejection involving administration of BLyS binding polypeptide. The BLyS binding polypeptides are used in the treatment, prevention or amelioration of diseases such as immune system diseases, proliferative diseases, diseases of cells of hematopoietic origin, graft rejection, allergies, infectious diseases, arteriosclerosis, inflammatory disorders, hypergammaglobulinaemia, blood clotting disorders, ischaemia, and neurodegenerative diseases. The present sequence is a Blymphocyte stimulator protein binding peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B Lymphocyte Stimulator protein; B Lymphocyte Stimulator binding peptide; BLyS; biological fluid; serum; plasma; lymph; blood; urine; spinal fluid; synovial fluid; saliva; mucus.
                                                                                                                                                                                                                                                                                                             The treatment of various diseases e.g. rheumatoid arthritis, comprises administering B Lymphocyte stimulator binding polypeptide.

                                                                                                                                      New B-lymphocyte stimulator binding polypeptide useful in detecting or isolating BLyS or BLyS-like polypeptide comprises a specified amino acid
                                                                                                                                                                                                                                                                                                                                             The invention relates to a B Lymphocyte Stimulator (BLyS) binding polypeptide. BLyS binding peptides bind BLyS or BLyS-like proteins reversibly or irreversibly. The binding peptides are used in detection, isolation and/or purification of BLyS in a solution such as water or a buffer solution, as well as any fluid and/or cell obtained from an individual blodgical fluid, body tissue, body cell, cell line, tissue culture or other source containing BLyS or BLyS-like polypeptides. The blodogical fluids include sera, plasma, lymph, blood, blood fraction, urine, synovial fluid, spinal fluid, saliva and mucous. Sequences ABG33465-33415, ABG33423-33575, ABG33588-33846, ABG33848-33850 and ABG33852 represent BLyS binding peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cadherin-7 cell adhesion recognition cyclic peptide SEQ ID NO:1375.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Diod vessel regression in a creating drug delivery to the central nervous system, treating a demyelinating drug delivery to the increasing vasoperameability in a mammal, enhancing adhesion of anonclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for e.g. enhancing or directing neurite outgrowth, facilitating wound healing or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for reacting e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The products can also be used for detection and diagnosis and in bioreactors. AAY6052 to AAY64572 represent specifically claimed peptides, and AAX64573 to AAX64573 and AAX33183 to AAX33186 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                               The present invention describes cadherin modulating agents (MA) comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in amammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting anglogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-expressing cell, preventing or treating obseity in a mammal, stimulating
                                                                                                                                                                                                                                                                  Claim 36; Page 172; 252pp; English.

The present invention describes caunting modulating agence (mapprising peptides which comprise a nonclassical cadherin cell adhesion recognition (GAR) sequence. The MAS can be used for modulating cadherin-mediated functions They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug through the skin of a mammal, compared to a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, stimulating angiogenesis in a mammal, enhancing drug delivery to the expressing cell, preventing or treating obesity in a mammal, stimulating contral nervous system, treating a demyelinating adversor to the increasing vasopermeability in a mammal, enhancing drug delivery to the increasing vasopermeability in a mammal, enhancing advestion of contral nervous system, treating a demyelinating synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for can conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age or reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for detection and diabetes The conducts can also be used for detection and diagnosis and in bioreactors. AAV66132 to AAV64512 represent specifically claimed peptides, and the answer of the answer.
                                                                                                                                                                                                                                                                                                                                                     New cadherin modulating agents, used for modulating nonclassical cadherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-7; cadherin-8; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; protocadherin; cadherin; desmecognition; cadherin; calcing binding; cancer; tumour; obesity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                            -mediated functions for treating e.g. cancers, obedity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cadherin-12 cell adhesion recognition cyclic peptide SEQ ID NO:1799.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes cadherin modulating agents (MA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ·;

New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                         present invention describes cadherin modulating agents (MA)
rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                            Claim 48; Page 180; 252pp; English

comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating recognition (CAR) sequence. The MAs can be used for modulating cancerosing callesial acaderin-mediated functions. They can be used for e.g. inhibiting adhesion of nonclassical-cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, chancing delivery of a drug through the skin of a mammal, can mammal, inhibiting metastasis of a cancer in a mammal, inhibiting cancer in a mammal, inhibiting of anylogenesis in a mammal, inhibiting observed in a mammal, stimulating cancer in a mammal, inhibiting anylogenesis in a mammal, inhibiting apoptosis in a nonclassical cadherin-expression in a mammal, enhancing drug delivery to the contral nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal, enhancing symaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating enclise, inhibiting symaptic stability in conclassical cadherin-expressing cells, inhibiting symaptic stability in a mammal. They can also be used for treating enclised for in a conclassical dependence or enhancing adhesion of foreign tissue in a conformal degeneration, multiple sclerosis and diabetes. The products can also be used for treating enclassis, arthritis, and packed the conclassis and in bioreactors. Anylossy to the conclassion of the conclassion in the conclassion of the conclassion in the conclassion of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

The present invention describes cadherin modulating agents (WA)

Comprising peptides which comprise a nonclassical cadherin cell adhesion

recognition (CAR) sequence. The MAs can be used for modulating of

conclassical cadherin-mediated functions. They can be used for e.g.

conclassical cadherin-mediated functions. They can be used for e.g.

conclassical cadherin-mediated functions. They can be used for e.g.

conclassing delivery of a drug through the skin of a mammal, training conclassing delivery of a drug through the skin of a mammal, inhibiting metastasis of a cancer in a mammal, trainibiting cappenesis in a mammal, trainibiting conclassing call, preventing or treating obesity in a mammal, stimulating concrassing vasopermeability in a mammal, enhancing drug delivery to the conclassical cadherin-expressing cells, inhibiting synaptic stability in a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age correlated macular degeneration, multiple sclerosis and diabetes. The mammal. They can also be used for treating e.g. psoriasis, arthritis, age conclucts can also be used for treating e.g. psoriasis, arthritis, and mammal. They can also be used for treating e.g. psoriasis, arthritis, age conclucts can also be used for treating e.g. psoriasis, arthritis, and mammal. They can also be used for detection and diabetes. The conclucts can also and AAX53186 represent sequences used in the conclusion of conclusions and in bioreacces. AAX66572 represent specifically claimed peptides, and in bioreacces in the conclusion of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                         Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-18; cadherin-15; T-cadherin; PB-cadherin; cadherin, related neuronal receptor; II-cadherin; protocadherin; desmocallin; calcium binding; cancer; tumour; obesity; rheumatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                Cadherin-14 cell adhesion recognition cyclic peptide SEQ ID NO:3971.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the exemplification of the present invention
